The Time Machine by H.G. Wells: The book's protagonist is an English scientist and gentleman inventor living in Richmond, Surrey, in Victorian England and identified by a narrator simply as 'the time traveller'. The narrator recounts the traveller's lecture to his weekly dinner guests that time is simply a fourth dimension and his demonstration of a tabletop model machine for travelling through it. He reveals that he has built a machine capable of carrying a person through time and returns at dinner the following week to recount a remarkable tale. His efforts to communicate with them are hampered by their lack of curiosity or discipline, and he speculates that they are a peaceful communist society, the result of humanity conquering nature with technology and subsequently evolving to adapt to an environment in which strength and intellect are no longer advantageous to survival.
